

## A simple guide to RSN online spreadsheets - Average minimum travel time to reach the nearest key services by mode of travel, rural and urban areas, England 2011

The analysis of average minimum travel time to reach the nearest key services uses two drop down lists to select the information of interest. The lists allow the user to select the mode of transport and also the key service destination.

To select from these lists, please follow the following instructions:

Using the mouse, select either of the cells highlighted with a dashed border.

Clicking on the grey square with a blue triangle then presents the full list of either transport modes or destinations from which to select.

I hope this helps. If you have any comments or suggestions, please contact [dan.worth@sparse.gov.uk](mailto:dan.worth@sparse.gov.uk)
